

NEXSENTIALS®

Expressive Essentials®

The way we work has changed dramatically over the last few years. Today's business challenges and emerging work strategies are providing new opportunities in the workplace.

We recognize the types of work and tasks people actually do by offering these innovative products designed with maximum flexibility, for both individual work and collaborating with others.

As the workplace remains a gathering place, a collaboration center, and still the home base, NEXSENTIALS can help deliver a higher performing workplace within a constantly shifting business landscape. Rethink your space, think NEXSENTIALS by Peter Pepper.

Access

Access Mobile Desk fulfills the needs of the nomadic user in any environment that is open and collaborative, bridging the gap between the cubicle and pedestal table. The work surface rotates around the pedestal to create your own configuration, while accessing storage, power, USB and a modicum level of privacy. Work surface in 3D laminate, pedestal in powder coated steel.

Design: Joe Ricchio and Eric MacDonald

Shown with the Grab Stool which can be stored inside the pedestal.

Access Mobile Desk with work surface in parked position. Sliding doors on each side allow easy access, locking option available. Cabinet storage area also holds the optional Grab stool.

Convenient storage area for the 10' electric module power cord when not in use. AX35
38 1/2w x 15 1/2d (Top) 32w x 29 1/2h x 13 1/2d (Pedestal)

PopCarts are designed to support mobile work strategies, collaboration and personal tools, anywhere, anyplace in the emerging workspace. The top work surface is hinged with a soft down stay, for access to storage. Large opening allows easy access to the interior for messenger bags, purses and backpacks. Exterior pocket provides additional storage. Steel with perforated pattern finished in powder coated color.

PopCarts

with optional seat pad

PCM 20 3/8w x 25h x 15 3/4d

Designed To Work Together

Created by several designers, each possessing their own vision. Our NEXSENTIALS transforms space into places where people gather, collaborate, share and learn.

o4i - Henrik Kjellberg & Jon Lindström - **iBooth, StackR Stool**

iBooth® is designed for collaborative and common areas, offering both privacy and acoustic sound dampening, while maintaining visibility to the surrounding space. For the user, we wanted it to be both welcoming, and offering a pleasant tactile experience. The **StackR** stool is designed to be a great companion to iBooth, but also to work as an independent and elegant seat for any interior setting. It combines a slender and minimalistic appearance with great comfort and function.

Eric Pfeiffer - **GoTo Worktables, MeetUp, HangOver, PopCarts, Tilt**

My design approach is focused on utility, beauty and creating simple gestures that address the design challenges with products inspired by nature and built for longevity. It is this pure design ethos, coupled with a casual sensibility that results in timeless objects rooted in a deep understanding of usability and manufacturing.

Joe Ricchio & Eric MacDonald - **Acess Desk, ReSort, Cardiff, Mesa, Oceano, Clocks**

Collaborating together, we strive toward creating problem solving design solutions that are also esthetically appealing to the interior designer, the specifier and ultimately the user. Our goal is always to design comfortable, functional and ageless pieces that are simultaneously inviting, simple and elegant. Contemporary yet timeless, our products are suitable in an array of environments.

Andrea Ruggiero - **Zuma, PickUp, Kona, REMix**

Trained as an industrial designer, I approach design as a generalist, working across all scales and bridging various disciplines.

Zuma and Pickup are designed to complement today's activity-based working scenarios. The Pickup tables can be used individually or grouped for collaborative meeting and working atmospheres, while Zuma screens can be placed to partition space for added privacy, and easily moved and reconfigured.

Remix creates a discrete dual-stream receptacle for conference/meeting rooms, narrow corridors and high-traffic areas, where space is at a premium. By elongating the form of the receptacle, we were able to reduce the footprint while maintaining its capacity.

The **Kona Receptacle and matching Planters** introduce a distinctive new language to the landscape of site furnishings; suggestive of natural forms such as volcanos, that create an elegant look suited for any public space.

Chris Panichella - **Mode, ReForm, Arrow**

In lieu of an overarching design philosophy, I prefer to focus on authentic collaborations between the manufacturer, the intent of the project, and the end users of our products. The goal is to tailor market solutions that perfectly blend my design sensibilities with Peter Pepper's rich heritage and their expertise in metal, wood, and plastic fabrication. With this honest approach we create honest solutions.

Peter Stathis - **Stream**

When designing products for today's contemporary environments, my desire is to balance aesthetics, efficiencies and heightened performance characteristics in order to provide objects with inherent beauty, simplicity and self-evident service in-mind.

Peter Tu - **Polygon**

The concept behind **Polygon** is to create a piece of furniture that not only serves as a functional seat but also as a visually striking sculpture. Polygon's angular surfaces and geometric form draw inspiration from modern skyscrapers.
